NEW INFRARED CONTROL UNIT

SCORPIO has a new 4 Band INFRARED CONTROL UNIT that is available in two forms, either assembled or unassembled. Both kits come with switches and battery holders. Motors are not supplied. Although motors can be used as output devices any suitable output device can be used instead of motors ie. Solenoid, Relay, Buzzer etc. The INFRARED CONTROL UNIT can transmit on four (4) bands, so that 4 different devices can be operated at the same time, by selecting different bands using the band selection switch.

The Receiver is mounted on a vehicle or whatever device you choose to make.

The INFRARED CONTROL UNIT is for indoor use only and will not operate outdoors. It can operate up to a distance of approximately 20 metres.

NOTE: Motors are not supplied with the kit and are only shown in the picture for clarity

See the Intermediate Level Section of Technology Kits for Pricing

Your feedback on this kit would be greatly appreciated.
