

# CLOCKS...

*Upcycling leads the way to new ideas in the Design and Technology area.*

*A clock movement can be used with just about anything.*

**Clock making** has traditionally been used in the woodworking area. A quick search of the web reveals that this is no longer the case. Clocks are now used in many upcycled\* products.

By **upcycling**, products are given a new lease of life. This is desirable for many reasons. Amongst these are the environmental issues. We are all aware the 3 R's – Reduce, Reuse, and Recycle. But, we can take this one step further. Upcycling does more than just reuse – it gives the object a new lease of life in a different form.

In today's throwaway society the idea that we can do something else with our e-waste etc. is commendable. Why not give upcycling a go?

Definition of upcycling (verb) Reuse discarded objects or material in such a way as to create a product of higher quality or value than the original.

## UPCYCLING
