

AS 2016 CLOSES . . .

The end of 2016 year is approaching. We are all looking forward to a well-earned summer break.

This year has been a busy one for all of us at Scorpio. We have worked on developing new projects, writing and updating teaching units and assisting you in many ways. We have attended 10 fantastic DATTA / STEM conferences around Australia. This has given us the opportunity to meet many of you and introduce you to the great projects that Scorpio supplies.

Thank you for taking the time to stop and chat with us. Your questions and feedback help us develop new ideas and improve existing kits.

We have delivered a monthly newsletter straight to your inbox. We hope that it has provided you with new ideas. The newsletters are now also available on our website. Ideas or articles for future newsletters are always welcome.

In 2017 we are introducing a range of "**Pat's Micro-controller**" projects suitable for junior secondary. The Micro-controller is constructed first. The student can then build onto this with exciting projects such as the Animated LED disc or the Robot buggy. An added bonus is that the Micro-controller kits can be controlled remotely with an infra-red remote if desired.

Primary schools are looking for affordable projects that allow children to experiment and learn about the world around them. We hope to launch new products during the year that will assist in making this an exciting learning opportunity. Your suggestions are most welcome.

Thank you for the opportunity to work together with you this year. We hope to be able to help you again in the New Year.

Season's Greetings and best wishes for the New Year

We at Scorpio Technology wish you, your students and families a safe and enjoyable holiday.

Thank you for your support during the year and we look forward to assisting you in 2017.

Our office will be closed from 3 p.m. on the 22nd December 2016
until 9 a.m. 18th January 2017.

If you require any assistance during this time please email, fax or phone and leave a clear message.

Inspirational projects for teaching **Design, Creativity and Technology**
