

Soccer 'Bot Playing board

Thank you to Industrial Design and Technology Teacher Matthew Sanders of Lockyer District High School, Gatton, Qld. who shared this design with us. The board's line-work was done by a colleague, Ms Linda Abraham.

CONSTRUCTION:

The playing board is approx. 1200mm x 850mm, with edging of 42 x 19 pine on a 19mm plywood off-cut base (there is a 300mm steel rule in the lower left corner to give an idea of size).

USAGE:

This board is used by the students to test their Soccer 'Bots in a friendly competition.

In addition it is frequently used to demonstrate the working Soccer - 'Bots at subjects selections nights for students who are thinking about enrolling in the subject - to show what they will build.
